Submission guide

Huawei Finland Tech Arena 2026: Stress or Sweat?

1. Prepare your submission

Create one `.zip` file (at most 50 MB) containing a Python file that exposes `get_model()` and your ONNX model with the same basename, for example `your_model.py` and `your_model.onnx`. See the topic description for the model requirements and an example.

2. Upload

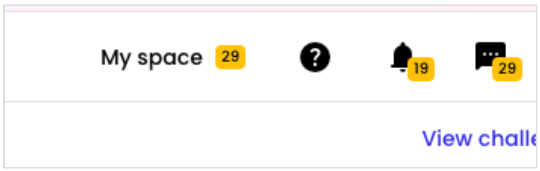

Open your team's participation form on Agorize and add your file in the **Model (.zip)** field. Wait for the upload to finish and check that the file appears in the form.

- **New submissions:** to submit a new model, replace the file in the Model (.zip) field. Changing the zip is enough.
- **Limit:** up to 3 submissions per team per day. Your best valid submission counts for the ranking.

3. Automatic evaluation and results

Uploading a new zip automatically triggers evaluation; there is no need to click Submit your participation. Scoring runs in the background and can take a few minutes. The score, or an error message if the submission could not be evaluated, appears in the team admin chat, which you open with the chat icon at the top right of the Agorize page (right-most icon below).

If there is an error, correct your model and upload a new zip.

See the leaderboard for the current ranking.

4. Get help

Use the team admin chat for questions about your team, your uploaded file or an evaluation message. Include the file name and any error message. Use the public discussion board for questions relevant to all participants.

FAQ: how do I update my submission?

Go to the challenge page and click **View your participations** (do not create a *New participation*). Open your existing participation and replace the file in the Model (.zip) field. The new zip is evaluated automatically; there is no need to click Submit.
